

## Case study

# A leading university's partnership with Performanta

## Overview

In 2019, a global leading university decided to stay ahead of threat actors by engaging cybersecurity expertise. At the tender process, Performanta impressed with their approach to people, process and technology.

The university's CIO commented: "Back then, we didn't have any means of accumulating data on cybersecurity across devices. Nor did we have a sophisticated SIEM solution. During the RFP, it was clear

that Performanta knew our environment, they knew what to look for, and could combine state-of-the-art technology with genuine human insight. We were pleased to invite them onboard."

Quickly, Performanta's team set about implementing an overall cybersecurity strategy that could act as the central point of collaboration in coordinated efforts to monitor, assess and defend against cyberattacks.

## The Result

Two years on, the university's security posture is now in a more assured position, with SOC monitoring a key element of the managed services partnership.

Performanta team lead, Tatenda Kawadza, liaises with the university's IT team on a regular basis.

**He said:** "The university had a list of log sources that we prioritised as part of the onboarding project. These are continuously assessed by our engineering and analyst teams and we make regular improvements via rule creation and refinement to ensure improved visibility. We would like to thank the university team for making this a really positive partnership."

**The CIO added:** "A vulnerability assessment wasn't part of the original agreement but when the need arose, Tatenda and the team were happy to get involved. They quickly got to grips with the assessment with minimum fuss."

Performanta's ability to routinely monitor the environment while also educating the university's staff on best practices around preventing, detecting and responding to incidents, has been keenly received.

The CIO said: "The whole reporting structure at Performanta is impressive and the team are always fully available. The education they've provided to our team has been superb. I'd be happy to recommend them."

### CIO,

Global Leading University

We're really pleased with the engagement from Performanta. A vulnerability assessment wasn't part of the original agreement but when the need arose, they were happy to get involved. They quickly got to grips with the assessment with minimum fuss."

### Tatenda Kawadza,

Technical Manager, Performanta

The university had a list of log sources that we prioritised as part of the onboarding project. These are continuously assessed by our engineering and analyst teams and we make regular improvements via rule creation and refinement to ensure improved visibility. We would like to thank the university team for making this a really positive partnership."
